Applicant's election with traverse of group I in the reply filed on 4/22/2005 is 1. acknowledged. The traversal is on the ground(s) that firstly, Applicant contends that there would be no material difference to the method of claim 12 in incorporating the proposed changes and that dependent claim 5 requires the difference. This is not found persuasive because the basis of the restriction is that the apparatus could be produced by a different method and using a bellows in lieu of a spring is a structural difference. Claims 1 and 14 are the independent claims that are relied upon for patentability and it is these two claims that are compared to method claim 12 to decide if the two groupings of claims are independent or distinct inventions. In addition to claims 1 and 14 not requiring a helical spring wherein they could be made with other biasing elements such as a resilient bellows, claims 1 and 14 could also be made using a tack welded washer for a bellows (or alternately a spring) retainer and thereby not requiring the method steps of providing a valve stem with a radial groove and inserting a resilient member into the groove to retain the spring as called for in claim 12. Also, claims 1 and 14 could also be made using a screwed on end seal for the valve stem and not requiring an enlarged diameter at the end of the valve stem to form a seal. Consequently, as claimed, claims 1 and 14 could be assembled using a method that inserts a bellows in lieu of a helical spring, uses a rigid tack welded washer on a smooth valve stem for a biasing means retainer in lieu of a resilient member in a radial groove, uses a bolted on end seal in lieu of an enlarged end diameter wherein a single diameter valve stem could be used in assembling the structures called for in claims 1 and 12 in lieu of the three diameter valve stem of claim 12. Consequently, the method that could be chosen for

Art Unit: 3751

assembling the structures of claims 1 and 14 is a materially different process from the method of assembly in claim 12.

The requirement is still deemed proper and is therefore made FINAL.

- 2. Claims 12 and 13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 4/22/2005.
- 3. The disclosure is objected to because of the following informalities: The background heading on page 1, line 3 has typographical errors. Page 6, line 24 includes an informal amendment that has not been dated and initialed by the inventors and thereby must be resubmitted.

Appropriate correction is required.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3, 9, 14, 15 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Anderson. Anderson discloses a valve including a valve body having a first end adjacent 15, a second end adjacent cap 27, an exterior circular surface as shown in figure 2, an intake port 17, an exhaust port 12, a first end seal seat 39 surrounding the intake port, as shown in figures 1 and 3, an angle of about 120 degrees between 12 and 17, a valve guide bore 23 and 36, a valve stem 24 and 32 which slides

when 27 is rotated causing the threads of 24 to turn and slide vertically within 23 then push 32 down within 36, the valve is resiliently biased by spring 34 which abuts retainer 33 and seal seat 39 and a valve stem end seal 38.

- 6. Claims 1, 2 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Terkel. Terkel discloses a valve including a valve body having a first end 9, a second end 22, an exterior circular surface as shown in figure 3, an intake port 9, an exhaust port 23, a first end seal seat 12 surrounding the intake port, as shown in figures 1 and 2, an angle of about 120 degrees between 9 and 23, a valve guide bore at 19, a valve stem 18 which slides when 21 is pushed, the valve is resiliently biased by spring 22 and a valve stem end seal 21 wherein the valve will shut off both liquid flow and the flow of any gas entrained in the liquid as shown by the use of vent 24 and as claimed.
- 7. Claims 1, 2, 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuntzel et al. Kuntzel discloses a valve including a valve body having a first end D, a second end L, an exterior circular surface as shown in figure 2, an intake port adjacent B, an exhaust port c, a first end seal seat engaging B surrounding the intake port, as shown in figures 1 and 2, an initial angle of about 120 degrees between K' and c, a valve guide bore at K', a valve stem K which slides when X is pushed, the valve is resiliently biased by spring R and a valve stem end seal B wherein the valve will shut off both liquid flow and the flow of any gas entrained in the liquid as claimed.
- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Monner, Layden and Terry teach other gas valves.

9. Claims 4-6, 8, 10, 11, 16, 17 and 19-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
